The theoretical framework of "Adaptive reuse" (a term originally developed in the field of architecture) is here applied to a wide spectrum of cultural activities, from the composition of new texts on the basis of earlier ones to the re-creation of concepts and rituals. The first section of this volume consists of five case studies dealing with the adaptive reuse of Sanskrit philosophical and grammatical texts in Sanskrit works of philosophy, grammar and poetry. In these cases, adaptive reuse allows the creation of new forms and contents within a traditionally established framework in which the prestige of the sources of adaptive reuse reflects upon its target. In the second section, entitled "Adaptive Reuse of Tropes," the motif of the chariot in Vedic, medieval and contemporary works and rituals is analyzed and fruitfully employed in various religious contexts. The chapters of the third section deal again with philosophical and religious texts, this time focusing on the adaptive reuse of sources that are no longer available or never existed. It emerges that the reuse of virtual texts was frequently intended to support the introduction of innovations into established traditions. In some cases, the prestige of the reusing works even reflected back on the allegedly reused source. Finally, the section "Reuse from the Perspective of the Digital Humanities" deals with the computer-based identification of possibly reused text-passages in epic literature that otherwise would remain undetectable.

This book is a comprehensive contributed volume that aims to describe and explain the design, fabrication, operating characteristics, and specific applications of the most popular and useful types of specialty optical fibers. These "specialty fibers include any kind of optical fiber that has been architecturally manipulated to diverge from a conventional structure. For instance, metal-coated fibers can be utilized for bandwidth improvement, and hollow core fibers offer more controllable dispersion for sensitive medical procedures. Applications for these specialty fibers abound in the biomedical, sensors, and industrial fields, as well as in more traditional communications capacities. This book will act as a specialty fiber "guided tour, hosted by the top names in the discipline. The globally renowned editors, Drs. Mendez and Morse, have extensive experience in research, academia, and industry. *Completely covers biomedical and industrial sensor technology with emphasis on real world applications *Comparative studies of pros and cons of all fiber types with relation to test and measurement, mechanical properties and strength, and reliability *Easy to access essential facts and details at the beginning of each chapter

This book gives a detailed overview of SIP specific security issues and how to solve them While the standards and products for VoIP and SIP services have reached market maturity, security and regulatory aspects of such services are still being discussed. SIP itself specifies only a basic set of security mechanisms that cover a subset of possible security issues. In this book, the authors survey important aspects of securing SIP-based services. This encompasses a description of the problems themselves and the standards-based solutions for such problems. Where a standards-based solution has not been defined, the alternatives are discussed and the benefits and constraints of the different solutions are highlighted. Key Features: Will help the readers to understand the actual problems of using and developing VoIP services, and to distinguish between real problems and the general hype of VoIP security Discusses key aspects of SIP security including authentication, integrity, confidentiality, non-repudiation and signalling Assesses key aspects of SIP security issues facing users of SIP, and details the latest theoretical and practical solutions to SIP Security issues Covers secure SIP access, inter-provider secure communication, media security, security of the IMS infrastructures as well as VoIP services vulnerabilities and countermeasures against Denial-of-Service attacks and VoIP spam This book will be of interest to IT staff involved in deploying and developing VoIP, service users of SIP, network engineers, designers and managers. Advanced undergraduate and graduate students studying data/voice/multimedia communications as well as researchers in academia and industry will also find this book valuable.

Poetry. "I am spending my 39th year practicing uncreativity. On Friday, September 1, 2000, I began retyping the day's NEW YORK TIMES word for word, letter for letter, from the upper left hand corner to the lower right hand corner, page by page." With these words, Kenneth Goldsmith embarked upon a project which he termed "uncreative writing", that is: uncreativity as a constraint-based process; uncreativity as a creative practice. By typing page upon page, making no distinction between article, editorial and advertisement, disregarding all typographic and graphical treatments, Goldsmith levels the daily newspaper. DAY is a monument to the ephemeral, comprised of yesterday's news, a fleeting moment concretized, captured, then reframed into the discourse of literature. "When I reach 40, I hope to have cleansed myself of all creativity"-Kenneth Goldsmith.
