Childhood obesity has reached epidemic proportions: More than 18 million American children are considered obese and are at risk for health problems. In fact, today's generation of kids may be the first to experience shorter life spans than their parents. Leading pediatrician Dr. Joanna Dolgoff's Red Light, Green Light, Eat Right teaches kids how to make healthy choices based on the principles of the traffic light: green light foods are nutritious, yellow light foods are eaten in moderation, and red light foods are occasional treats. The program, which has a proven 96 percent success rate, can be tailored to suit any child's age, gender, and weight goals. Snacks and meals are designed to ensure that kids get the nutrients they need to not only lose or maintain weight, but to grow strong, healthy bodies. Complete with sample menus, recipes, and an index of more than 1,000 color-coded foods, Red Light, Green Light, Eat Right provides a practical solution for one of the biggest health crises facing America's children.

"Regardless of your place on the political spectrum, there is much to admire in this book, which reminds us that the stewardship of nature is an obligation shared by all Americans." -U.S. Senator Angus S. King Jr. The Green movement in America has lost its way. Pew polling reveals that the environment is one of the two things about which Republicans and Democrats disagree most. Congress has not passed a landmark piece of environmental legislation for a quarter-century. As atmospheric CO2 continues its relentless climb, even environmental insiders have pronounced "the death of environmentalism." In *Getting to Green*, Frederic C. Rich argues that meaningful progress on urgent environmental issues can be made only on a bipartisan basis. Rich reminds us of American conservation's conservative roots and of the bipartisan political consensus that had Republican congressmen voting for, and Richard Nixon signing, the most important environmental legislation of the 1970s. He argues that faithfulness to conservative principles requires the GOP to support environmental protection, while at the same time he criticizes the Green movement for having drifted too far to the left and too often appearing hostile to business and economic growth. With a clear-eyed understanding of past failures and a realistic view of the future, *Getting to Green* argues that progress on environmental issues is within reach. The key is encouraging Greens and conservatives to work together in the space where their values overlap—what the book calls "Center Green." Center Green takes as its model the hugely successful national land trust movement, which has retained vigorous bipartisan support. Rich's program is pragmatic and non-ideological. It is rooted in the way America is, not in a utopian vision of what it could become. It measures policy not by whether it is the optimum solution but by the two-part test of whether it would make a meaningful contribution to an environmental problem and whether it is achievable politically. Application of the Center Green approach moves us away from some of the harmful orthodoxies of mainstream environmentalism and results in practical and actionable positions on climate change, energy policy, and other crucial issues. This is how we get to Green.

Fuel cell and hydrogen (FCH) technology is a very promising zero-emission powertrain solution for the heavy-duty trucking industry. The FCH 2 JU subcontracted this study to analyse the state-of-the-art of the technology, its surrounding policy and regulatory regime, ongoing trial and demonstrations projects, and its total cost of ownership and market potential. Furthermore, specific case studies and industry experts identified remaining technological and non-technological barriers for FCH technology in different trucking use cases. The study projects a potential fuel cell trucks sales share of approx. 17% of new trucks sold in 2030 based on a strong technology cost-reduction trajectory. With scaled-up production of FCH trucks and hydrogen offered below 6 EUR/kg, FCH heavy-duty trucks (FCH HDT) provide the operational performance most comparable to diesel trucks regarding daily range, refuelling time, payload capacity and TCO. Nine case studies were developed as first tangible business opportunity blueprints for the industry. They also provide a view on current limitations of real-life operations. In conclusion, 22 barriers have been identified that, successfully tackled, will unlock the full commercial potential of FCH HDT for the trucking and logistics industry. The study proposes tailored R&I projects and policy recommendations that address such remaining barriers in the short term.

This unique, research-based investigation of the U.S. breast cancer movement compares the "pink" and "green" efforts within the movement and documents their use of similar citizen-science alliances, despite the contention over the use of consumer-based activism and pink products. * Examines research findings that suggest that the pink and green aspects of the breast cancer movement are no longer separate but in fact are converging towards a focus on environmental prevention * Provides an in-depth examination of advocacy organizations and the ways in which an organization's structure and ideology shape its agenda and strategies * Looks critically at controversial aspects of the consumerism of the pink movement, the small portion of sales actually given to cancer research, and other shortcomings of this attempt to shop our way out of a nonetheless still-increasing disease * Presents valuable information for upper level undergraduate and graduate students in political science within American politics or health politics courses as well as those studying women's and gender studies, sociology, nursing, and non-profit enterprises

IN PREFAB GREEN, architect Michelle Kaufmann shares her vision of creating thoughtful, sustainable design for everyone. Her firm, Michelle Kaufmann Designs, blends sustainable home layouts, eco-friendly materials, and low-energy options to create a "prepackaged" green solution to home design. Kaufmann tells about five eco-principles that are present in every design her firm creates—smart design, eco-materials, energy efficiency, water conservation, and healthy environment—and how each work together to create homes that make a difference. Michelle Kaufmann founded Michelle Kaufmann Designs in 2002. Michelle's work is widely published and her homes have been showcased in a number of museums including the National Building Museum, the Vancouver Art Center, MOCA in Los Angeles, and Chicago's Museum of Science and Industry. Michelle lives in Marin County, California. Cathy Remick has worked as a staff architect and designer for several national firms in San Francisco and Washington, D.C. She is a design manager for mkStudios. She lives in Orinda, California.

Searching for a diet that helps you lose the unnecessary weight in a fast, safe and affordable way? Tired of diet plans that promise results but require an immense amount of time and effort to plan, prep meals and count calories? And falling off the wagon in the process? You can finally stop worrying about losing time, money or motivation with the Optavia diet! The Optavia diet can deliver its promise of success because of how it helps the body lose weight in a short amount of time. Seeing results fast is not only a confidence-booster but it also creates momentum and motivation to keep going and staying on track. And now, with the Lean and Green Cookbook, you will be equipped with all the necessary information to start the diet, so get ready for success! Learn the fundamentals of the Optavia diet and what it does for the body to effectively lose weight safely and quickly. Simple but thorough explanation about the components and differences between 5&1 Medifast plan and the Lean & Green plan so you can choose your preferred way to take on the Optavia diet. Build a healthy relationship with food as you educate yourself with the nutritional information that comes with every recipe. Soon, dining out will be a breeze when you know how to request for changes to your meals that fit your needs. No more settling for your meals with just a smoothie or snack bars as meal substitutes when you can meal prep and cook easily and quickly with the highly detailed recipes with easy to follow directions. Many mouthwatering Lean and Green-approved and Healthy recipe ideas for breakfast, lunch, dinner, dessert, salad, snack, side dishes, and smoothies to help make every meal a satisfying one. You won't just stave off hunger pangs, you will keep the weight off for life. The Optavia diet not only sets you up for success, its methodology makes the diet an easy one to stick to and maintain for life. There's no reason to wait any further. Click on the "Buy Now" button to start creating the life of confidence and radiance you deserve!

Whereas there is a plethora of programmes and publications about THE PROBLEM of global warming, this book provides THE SOLUTION. As time passes, the urgency, the relevance and the importance of THE SOLUTION embodied in this book increase. FOREWORD by an Adviser to U.S. government Nobel laureate professor emeritus. Endorsed by a Fellow of the (U.K.) Royal Society; and by eminent authors, academics, doctors and judges (U.S. & U.K.). Mortal, catastrophic weather progressively worsens from atmospheric warming caused by CO2 emitted by fossils misused as fuel. The unprecedented (new) formulation in this book proves not only that 1. the energy alternative to nuclear power and the fossils (oil, coal) already exists, but also that 2. it is non-polluting, and that 3. it comprises the cheapest fuel-energy known to mankind. Multiple-thousands of recent human fatalities, destruction of animals, crops and property are attributable to Global Warming's floods, hurricanes and drought. The formulation given in this book shows that the warming caused by misuse of fossils has been and continues to be totally avoidable and unnecessary. This book lays bare the ulterior (i.e. covert, corrupt) money-motive of corporate groups and politicians who have so far stood in the way of this SOLUTION's adoption. It is unforgivable for politicians to have exacerbated Global Warming by their continuing worldwide obstruction of the implementation of this SOLUTION. They endanger all by prolonging and intensifying Global Warming. This indictment of politicians entails their culpability for mortalities (homicide) and disasters worldwide, constituting crime of global enormity. This book contains what every responsible adult should know and militates on behalf of people interested in making and keeping our environment fit for humans and animals to live in. Its factual exposition provides the immediate SOLUTION to Global Warming and indicts politicians' betrayal and criminal dereliction. THE SCIENTIFIC SOLUTION TO GLOBAL WARMING in contexts of: AGRICULTURE (FOOD)/ ECOLOGY/ ECONOMICS & FUEL TECHNOLOGY/ ENVIRONMENT/ GENERAL KNOWLEDGE/ LAW/ POLITICS.

Abstract: In a highly populated area such as university campus, there is limited space available to implement green solution outside the buildings. Roof tops provide opportunities to implement solution that can reduce the net emission of the building operation. However, they might come with a high capital cost and higher life-cycle emissions. By comparing the installation of three different building energy-saving technologies on a roof top of a 6640 ft² education building located in Midwest area, we found that green roof is the best option of the green solutions considered. Green roof has the least negative net present value that ranges from -\$95,423 to -\$93,381 and a reduction of 595.16 metric tons of life-cycle CO₂ emissions, the highest among the three. For asphalt roof, the net present value ranges from -\$103,020 to -\$102,730 and reduction of 579.21 metric tons of life-cycle CO₂ emissions. Photovoltaic (PV) system is the most costly option. If we assume the efficiency of the PV system increases by 10 percent every decade without adding any capital cost, the net present value will range from -\$340,132.17 to -\$317,366.04 and the life-cycle CO₂ emissions will increase by 605.69 metric tons. On the other hand, if the efficiency does not improve, the net present value will range from -\$342,365.46 to -\$321,828.95 and the life-cycle CO₂ emissions will be 718.14 metric tons.

Presents a plan for alleviating environmental degradation and boosting the economy by moving away from
