Examining urban environmental issues at the macro, municipal level down to the micro community and individual level, this volume features cities and metropolitan regions across the global north and south with case studies from the United States, Canada, Eastern and Western Europe to India, Central America, South America and Africa.

Environmental Science for a Changing World captivates students with real-world stories while exploring the science concepts in context. Engaging stories plus vivid photos and infographics make the content relevant and visually enticing. The result is a text that emphasizes environmental, scientific, and information literacies in a way that engages students.

Extraordinary in the diversity of their lifestyles, insect parasitoids have become extremely important study organisms in the field of population biology, and they are the most frequently used agents in the biological control of insect pests. This book presents the ideas of seventeen international specialists, providing the reader not only with an overview but also with lively discussions of the most salient questions pertaining to the field today and prescriptions for avenues of future research. After a general introduction, the book divides into three main sections: population dynamics, population diversity, and population applications. The first section covers gaps in our knowledge in parasitoid behavior, parasitoid persistence, and how space and landscape affect dynamics. The contributions on population diversity consider how evolution has molded parasitoid populations and communities. The final section calls for novel approaches toward resolving the enigma of success in biological control and questions why parasitoids have been largely neglected in conservation biology. Parasitoid Population Biology will likely be an important influence on research well into the twenty-first century and will provoke discussion amongst parasitoid biologists and population biologists. In addition to the editors, the contributors are Carlos Bernstein, Jacques Brodeur, Jerome Casas, H.C.J. Godfray, Susan Harrison, Alan Hastings, Bradford A. Hawkins, George E. Heimpel, Marcel Holyoak, Nick Mills, Bernard D. Roitberg, Jens Roland, Michael R. Strand, Teja Tschamke, and Minus van Baalen.

This volume is an important and timely contribution to the field for it captures the rewards and challenges of service learning from the varied perspectives of faculty dedicated to this type of teaching, and, at the same time, illuminates strategies for campuses and non-profit organizations to adopt to solidify institutional commitment. Increasingly, service learning is valued as a teaching and learning strategy consistent with the democratic ideals of education, and to this end, a better understanding of the faculty role is essential to advancing practice and improving society.

This book offers an intensive investigation of past and present achievements and failures in international environmental law. * A chronology of milestone events, such as the Tisza cyanide spill and the death of the last passenger pigeon * Excerpts from key documents, including treaties such as the Convention on Biological Diversity and documents relating to the Corfu Channel dispute and other key cases, as well as UN and nongovernmental documents
