Developed by UK and US anesthetists with extensive experience in theater, this book describes the latest anesthesia techniques, practices, and equipment used in current combat and humanitarian operations. Includes chapters on topics such as injuries and physiology, team members, protocols, vascular access, airway management, burns, imaging, pain management and medications, regional anesthesia, ventilation, and postoperative management.

This exciting new text provides evidence-based information for anyone involved in hyperbaric oxygen therapy (HBOT). It outlines the physiologic principles that constitute the basis for understanding the clinical implications for treatment and describes recent advances and current research, along with new approaches to therapy.

Military surgeons must assume a leadership role in combat casualty care in circumstances that are far less than ideal. This handbook provides much of the information needed to tackle these issues and features state-of-the-art principles and practices of forward trauma surgery as used by military physicians in far flung locations around the globe. Featuring nearly 200 illustrations demonstrating proper techniques, Emergency War Surgery is the most trusted and up-to-date manual offered by the Department of Defense for military medical personnel in the field.

Developed by UK and US anesthetists with extensive experience in theater, this book describes the latest anesthesia techniques, practices, and equipment used in current combat and humanitarian operations. Includes chapters on topics such as injuries and physiology, team members, protocols, vascular access, airway management, burns, imaging, pain management and medications, regional anesthesia, ventilation, and postoperative management.

Updated from the 2013 edition, this volume reflects lessons learned from recent US involvement in Iraq and Afghanistan, and represents state-of-the-art principles and practices of forward trauma surgery. Expertly addresses the appropriate medical management of blast wounds, burns, and multiple penetrating injuries, as well as other battle and non-battle injuries. Topics include triage, hemorrhage control, airway/breathing, shock and resuscitation, anesthesia, infections, critical care, damage control surgery, face and neck injuries, soft-tissue injuries, ocular injuries, head injuries, extremity fractures, thoracic injuries, amputations, abdominal injuries, pediatric care, and more. A new chapter provides Tactical Combat Casualty Care guidelines. Significant updates were also made to the blood collection and transfusion chapters.
