Called "text neck," it's become apparent that the time that we as humans spend on our digital devices are having more of an effect on our skeletons than we thought. And, the result is, according to the study, a new "bony spike" that "lives" at the base of our necks, where our spinal column meets our brains.

"The language of the fantastic left its mark upon many different thinkers in 19th-century Europe. Marx's comparison of consumer goods to fetish objects, works by Villiers de l'Isle-Adam or other novelists about machines that assume lives of their own, or the diagnoses of psychological illness offered by doctors in Maupassant's tales all blur the lines between scientific description and beliefs in the magical. Building upon a wealth of critical studies devoted to the fantastic and upon Freud's theory of the unconscious, Jutta Fortin proposes that many classic stories of the fantastic undermine basic psychological mechanisms that are designed to help their users cope with shocking or disturbing events. By defining five of these defence mechanisms, and analyzing stories by eight writers that both illustrate and subvert such mechanisms, Dr. Fortin offers reasons why fantastic stories appealed to those readers who wished to better understand human motivations."--BOOK JACKET.

Striking changes have occurred in the world since the publication of the last edition of *Viral Infections of Humans*. The global population is rapidly approaching 8 billion; climate change is leading to the introduction of new hosts, vectors and virus diseases heretofore never seen in many parts of the world; technological advances have revolutionized the ability to recognize and characterize viruses new and old; vaccines are altering the epidemiological landscape of the diseases they target, in some cases raising the hope of their eradication and remarkably powerful computational tools are enabling not only detection of outbreaks of disease much sooner than in the past but also, through complex mathematical modeling, more accurate prediction of their potential impact. The new Fifth Edition of *Viral Infections of Humans* captures the both the excitement and frustration of the dynamic struggle between humankind and the viruses that continue to cause immense suffering. It presents the latest concepts, methods and technologies in epidemiology, detection, investigation, modeling and intervention. Updated and entirely new chapters by dozens of experts across the field provide analytic summaries of current knowledge of viruses and prions causing acute syndromes, chronic illnesses and/or malignancies. In sum, this ambitiously expanded volume offers a uniquely comprehensive perspective on viruses in humans, from agents of classic diseases (e.g., hepatitis, measles, polio, rabies and yellow fever), to those with greatest pandemic impact (e.g., influenza and human immunodeficiency virus), to those discovered relatively recently (e.g., henipavirus, metapneumovirus and norovirus). The new Fifth Edition of *Viral Infections of Humans* is an invaluable reference for students, fellows and established professionals in the fields of microbiology, public health and infectious disease epidemiology, medicine and health policy.

This extensive work brings together a quarter century of the work of Marc Treib, taking in the cultural meaning of the designed landscape, the lives and work of the leading names in the field, and a remarkable geographical and temporal range.

We are the first species with the ability to leave planet Earth and expand the horizons of existence into the infinite realm of the universe. Humanity has been working, learning and building toward this accomplishment throughout history. Those who live and work in space will be no different from their predecessors who left ancient homelands to venture into the unknown wilderness. But to travel and work in space, one must not only know the physical characteristics of the space environment, but also something about the human beings involved. Living in Space explains: -Technology necessary for staying happy, healthy and alive in space. - Effects of acceleration on the human body - The long term affects of living in zero-g conditions - The most harmful forms of ionizing radiation for humans - Nutrition and Sanitation - Basic problems of working in space. The people who go into space to live and work are setting the foundation for humanity's future.
