The simplex method provides a systematic algorithm which consist of moving from one basic feasible solution to

Algorithm is a popular algorithm for linear programming. The name of the algorithm is derived from the concept of a simplex and was suggested by T. S. Motzkin. Simplices are not actually used in the method, but one interpretation of it is that it operates on simplicial cones, and

these become proper simplices with an additional constraint. The simplicial cones in question are the corners of a geometric object called a polytope. The shape of this po
