Last year, Saudi Arabian Crown Prince Mohammed bin Salman announced plans to create a mega-city named Neom on the coast of the Red Sea. The plans for the city are ambitious indeed: at a cost of \$500 billion, Neom will be 17 times the size of London and 33 times the size of Manhattan. The city will cover 10,230-square-miles extending 285 miles along the coast of the Red Sea and run entirely on renewable energy.

Geographical listing of licensed day care facilities derived from lists "provided by state and regional licensing agencies." Entries give such information as name, address, telephone number, capacity, age range served, and contact person. Four volumes cover the northeastern, north central, western, and southern regions of the United States. Index.

In this volume, Marvin A. Sweeney builds upon his former work Form and Intertextuality in Prophetic and Apocalyptic Literature (FAT 45, 2005). He introduces further studies that take up several key issues, including the reading of prophetic books in their final literary form and the significance of textual versions for this reading. He also observes the intertextual relationships between the prophets and other works of biblical and post-biblical literature, and the reception of the prophetic books. Following an introduction that lays out methodological perspective, it includes the title essay for the volume, Reading Prophetic Books, as well as selections of papers devoted to Isaiah, Jeremiah in both its Masoretic and Septuagint forms, Ezekiel, individual books from the Twelve Prophets, and the reading of biblical texts in Qumran, Rabbinic, and Targumic literature.

Vols. 28-30 accompanied by separately published parts with title:
Indices and necrology.

The objective of this book is to catalyze the application of genomics to the diagnosis and treatment of oral diseases by comprehensively presenting focused discussions on the current state of knowledge. The first section book provides basic information about genetics, genomics and personalized medicine and the informatical methods available to apply and organize genetic data so that it has clinical relevance. Recognizing the genetic robustness of the oral cavity, the introductory section includes chapters on the oral micro biome and host genomics and response to infectious agents. The next two sections contain chapters which describe the genomics of specific oral diseases and conditions, including the genetic basis for mechanism and risk of treatment toxicities associated with cancer therapy and bisphosphonates. Four chapters focus on gene-based therapies and the pharmacogenomics applied to oral disease. The final chapter presents a provocative summary which describes a comprehensive vision of the melding of genomics to personalized medicine and the potential actionable outcomes that will likely affect clinical practice in the upcoming years.
