The precompiler does not reuse the link unless the number of open cursors exceeds the value ofxpress Edition MAXOPENCURSORS. This is useful for SQL statements that are often executed because it speeds up subsequent executions. There is no need to re-parse the statement or allocate memory for an Oracle Page 7/30

private SQL area.

Precompiler Options -Oracle Help Center To process a SQL if on statement, Oracle opens a work area called a private SQL area. The private SQL area stores information needed to execute the SQL statement. ... Precompile example programs using the precompiler option Page 8/30

MODE=ORACLE.

statements plus others that allow you to transfer data between Oracle and a host program. There are two types of dition embedded SQL statements: executable statements and directives. Executable SQL statements generate calls to the database.

Precompiler Concepts -Oracle Help Center Page 11/30

Summary of Precompiler Directives and Embedded SQL Statements Embedded SQL statements place DDL, DML, and Transaction Control statements within a procedural language program. Embedded SQL is supported by the Oracle Precompilers. Table E-2 provides a functional summary of Page 12/30

the embedded SQL statements and directives.

Embedded SQL 100 Statements and dition Precompiler Directives During precompilation, Pro*C/C++ generates C or C++ code that replaces the SQL statements embedded in your host program. The generated code contains data structures that Page 13/30

indicate the datatype, length, and address of host variables, as well as other information required by the Oracle runtime library, SQLLIB.
