This revised and updated second edition of The Globalization and Development Reader builds on the considerable success of a first edition that has been used around the world. It combines selected readings and editorial material to provide a coherent text with global coverage, reflecting new theoretical and empirical developments. Main text and core reference for students and professionals studying the processes of social change and development in " third world " countries. Carefully excerpted materials facilitate the understanding of classic and contemporary writings Second edition includes 33 essential readings, including 21 new selections New pieces cover the impact of the recession in the global North, global inequality and uneven development, gender, international migration, the role of cities, agriculture and on the governance of pharmaceuticals and climate change politics Increased coverage of China and India help to provide genuinely global coverage, and for a student readership the materials have been subject to a higher degree of editing in the new edition Includes a general introduction to the field, and short, insightful section introductions to each reading New readings include selections by Alexander Gershenkron, Alice Amsden, Amartya Sen, Anne-Marie Slaughter, Cecile Jackson, Dani Rodrik, David Harvey, Greta Krippner, Kathryn Sikkink, Leslie Sklair, Margaret E. Keck, Michael Burawoy, Nitsan Chorev, Oscar Lewis, Patrick Bond, Peter Evans, Philip McMichael, Pranab Bardhan, Ruth Pearson, Sarah Babb, Saskia Sassen, and Steve Radelet

World poverty and development are more salient than ever on the global political agenda. The campaigns of the global justice movement, the growing securitization of development in the aftermath of 9-11, the intensification of global inequality, and the perceived threats of global pandemics, migrations and failed states have contributed to a sense of renewed urgency. The contributors to this volume, including Bjorn Hettne, Fantu Cheru, Jeffrey Haynes and Bonny Ibhawah, share a common intellectual aspiration to re-unite the study of development with the study of international relations or global politics as it is more broadly conceived today. Although globalization has transformed the context of development, it has yet to significantly transform for the better the prospects for real development or human security amongst the worlds most vulnerable communities. Whether globalization, development and human security are inescapably trapped within a vicious circle or a virtuous cycle is the central concern of this book. The volume will be importance to student of development studies, international relations and politics, globalization and economics.

Comprising writings ordered around intentional and immanent 'development', this reader offers a compendium of classical and contemporary debates on development: Adam Smith and Karl Marx meet, among others, Robert Wade, Amartya Sen and Jeffrey Sachs.

The Community Development Reader is the first comprehensive reader in the past thirty years that brings together practice, theory and critique concerning communities as sites of social change. With chapters written by some of the leading scholars and practitioners in the field, the book presents a diverse set of perspectives on community development. These selections inform the reader about established and emerging community development institutions and practices as well as the main debates in the field. The second edition is significantly updated and expanded to include a section on globalization as well as new chapters on the foreclosure crisis, and emerging forms of community .

With Cold War politics lost as the organizing principle behind international politics, development has become the most import policy goal of every international organization. There is an underside (and a human side) to development, and feminism has made inroads into the highly technical debates and frothy prophecies by examining what the future really holds for the people who will live it. This book highlights the ways in which feminist analysis has contributed to a richer understanding of international development and globalization. By combining theoretical, empirical, and political perspectives and discussing cutting-edge debates around development, globalization, economic restructuring, and feminist economics, Gender, Development and Globalization presents the ultimate primer on global feminist economics.

The Globalization and Environment Reader features a collection of classic and cutting-edge readings that explore whether and how globalization can be made compatible with sustainable development. Offers a comprehensive collection of nearly 30 classic and cutting-edge readings spanning a broad range of perspectives within this increasingly important field Addresses the question of whether economic globalization is the prime cause of the destruction of the global environment – or if some forms of globalization could help to address global environmental problems Features carefully edited extracts selected both for their importance and their accessibility Covers a variety of topics such as the ' marketization ' of nature, debates about managing and governing the relationship between globalization and the environment, and discussions about whether or not globalization should be ' greened ' Systematically captures the breadth and diversity of the field without assuming prior knowledge Offers a timely and necessary insight into the future of our fragile planet in the 21st century

Globalization: The Reader addresses the big issues: communications and global media, political economy, cultural homogeneity and heterogeneity, new technologies, tourism, beliefs, and identity.

The essays collected in World in Motion all address the same issue: The global paradox that modern prosperity has entailed extreme environmental degradaton. Gary M. Kroll and Richard H. Robbins present readings covering all principal viewpoints on this matter, from the neoliberal belief that environmental and social problems can be fixed through a growing economy to the critics of globalization who equate growth with environmental degradation. This book asks an important question: Can we simply accelerate growth under the assumption that increased prosperity and new technologies will allow us to reverse environmental damage? Or do we need to transform our modes of living radically to maintain the health of the world around us?

Globalization and its relation to poverty reduction and development is not well understood. The book identifies the ways in which globalization can overcome poverty or make it worse. The book defines the big historical trends, identifies main global flows - trade, finance, aid, migration, and ideas - and examines how each can contribute to undermine economic development. By considering what helps and what does not, the book presents policy recommendations to make globalization more effective as a vehicle for shared growth and prosperity. It will be of interest to students, researchers and anyone interested in the effects of globalization in today's economy and in international development issues.
