Industrial Flat Head Six Engines The Chrysler Corporation built Flat Head Six engines for Industrial applications, like Pumps, Generators, Forklifts, Combines, and other equipment. Many of the Industrial engines were built for a specific purpose, like running a Generator, and may have parts or pieces that will not work well in a vehicle application.

## **Industrial Flathead Six Engines - Dodge Power Wagon**

The De Soto 251 and Chrysler Spitfire would continue unchanged until 1955, when they were replaced by the newly developed "Polyspherical" V-8s, but because the proven L-head was the only engine that fit easily in the engine bay of the original, military-style Power Wagon, that's not the end of the story.

There were essentially two lines of flathead inline-sixes made by the Chrysler Corporation. Chrysler and DeSoto used a longer 25 in (640 mm) block with greater cylinder spacing, while Dodge and Plymouth shared a 23 in (580 mm) block. There is one exception to this: when Chrysler established an engine foundry in Windsor, Canada in 1938, it was decided to only use the long block for all Canadian ...

One pump has a bolt on by pass hose and the other water pump has a by-pass hose that is pressed on. The water pump whose by pass hose is bolted on, has a trapezoidal shaped pad with three holes, two for the bolts and one for the by-pass hose. For the Chrysler flatheads, the bolt on water pump is the most common.
