This IB Math study guide is a great start, but you may need to supplement with outside tutoring, too. Only studying right before the IB Math SL/HL papers: As I said before, there are too many topics for both courses to master in only a few weeks (that's why these courses are spread out over a couple of years!).

Discrete Mathematics is usually the first math class students take that requires students to understand how to read and write mathematics. In particular, it is often the first class students are required to write proofs.

How to Pass Discrete Mathematics I
o Discrete mathematics deals with finite and countably infinite sets o Seems to be a term rarely used by mathematicians, who say what the are doing more specifically. o Some branches of discrete mathematics are: • Combinatorics (how to count things, how to make combinatorial objects that have desired properties)

Proof Obsession: Discrete math is about proofs. In lecture, the professor would write a proposition on the board — e.g., if n is a perfect square then it's also odd — then walk through a proof. Proposition after proposition, proof after proof. As the class advanced, we learned increasingly advanced techniques for building these proofs.

Glad I could make a difference. Here's some background on me: In high school, I was a member of the National Honor Society, graduated #11 in my class of 400 students with a GPA of 3.75 while taking advanced chemistry, physics, and math courses, went to college for four years (part of which to become a mathematics teacher), learned calc 1, 2, 3 and graduated with a 2 year degree with a 3.8 GPA.
