## Diving Science

The book is more about the physiology of diving in general than about the science of SCUBA. It's coverage of breath hold diving and diving mammals is interesting, but it's not really a resource for SCUBA divers. There isn't much information here on decompression algorithms, recompression schedules, etc.

Introduction to Diving Science The underwater environment is dramatically different than the environment we're accustomed to. Objects appear differently, the environment is denser, and pressure changes are more dramatic. An understanding of these physical differences will help you prevent injuries and enhance your diving experience.

For the most part, scuba diving is a relatively safe activity—as

long as you have a healthy respect for the laws of physics. Basically, it all comes down to pressure. Even though you might not normally notice, air actually has weight. At sea level, 14.7 pounds of air press down on every square inch of your body.
