A “tree of life” is the ideal visual of life’s evolutionary history—highlighting the diversity, the common ancestry, the survivors, the mass extinctions, and the evolution of key traits that changed the course of history for many species. Our tree of life identifies when all current living organisms first evolved in geological time.

Crocodile - Crocodile - Natural history: The young crocodile emerges from the egg with a length of 20-30 cm (8-12 inches). At first it remains with its siblings concealed at the edge of its water habitat in order to avoid various predators. Principal among these are fishes and birds, but larger crocodiles also prey upon the young.
